

Robot-Powered. Human-Driven.

Decrease costs, eliminate errors and reduce risk with an RPA-based framework for controls assurance and Internal Audit/SOX testing.

Your stakeholders and investors need assurance that internal controls are functioning as intended—but you need your audit team focused on driving business value.

We created PowerAudit so that you never need to choose between the two. PowerAudit harnesses the power of bots, the cloud, and a standardized framework to streamline the internal audit process—so your team members can focus on the high-value tasks that humans do best.

Smart Automation

PowerAudit offers three modular plug-and-play robots that collect and sample data 24x7 from your enterprise systems, so your team can focus on high-priority initiatives, like conducting data-driven risk assessments and better investigations.

Confident Control

Our customizable bots work within your network environment, continuously-monitoring and testing samples or 100% of your data following a standardized process with strict governance—including a built-in audit trail for improved accuracy and reduced risk.

Powerful Savings

With RPA, your team can spend less time on busy work and more time working on strategic deliverables—delivering powerful cost efficiencies. Remote, cloud-based management makes team collaboration a snap.

Give your stakeholders and investors assurance and confidence that internal controls are functioning efficiently and effectively with an internal audit solution that's **robot-powered, human-driven.**
