

Accelerate Your Business

Use RGP's proven Project Management Framework for cloud-based collaboration—anytime, anywhere.

When it comes to launching business-critical programs, projects and managing portfolios, you don't have time to waste.

That's why our team of leading program and project management consultants developed LaunchPM. Designed by project managers, for project managers. We've paired RGP's proven Project Management Framework (PMF) with the capabilities of a leading cloud-based platform—transforming enterprise strategies into business results.

Knowledge-Driven Framework

As part of RGP's PMF, our experienced consultants have developed a series of tools and templates, spanning from the initiation stage, through planning, execution, evaluation and close. Featuring built-in automations, our templates help you accelerate project setup, propel past learning curves and minimize the busy work of data entry.

The Big Picture from Any Angle

LaunchPM enables organization-wide visibility with customizable dashboards built to keep project owners, managers, and contributors on task, and stakeholders informed at key milestones. Auto-populated data can be viewed by workstream, function, and more, at the 30,000-foot view or at the micro-level, so that your team always has the information they need to make smart decisions.

Cloud-Speed Collaboration

LaunchPM is designed for use within a leading cloud-based platform. Our skilled consultants will bring your projects online and stakeholders in line to support rapid innovation, iteration, and collaboration from anywhere.

Whether you plan to set up a PMO, need support getting a project back on track, or need a view into your entire portfolio—we provide the human-first leadership and best-in-breed technologies to help you succeed.
