

Delivering Expert Project Execution for Cloud ERP

Successful transformation involves more than just implementing the technology, from data quality and governance to project and change management. We bring a tailored, client-centric approach to support large global deployments, providing blended solutions to ensure rapid adoption and sustainable success.

Whether it's part of a comprehensive transformation effort or upgrade of existing applications, RGP can help you at every step of the end-to-end process of planning, selecting and implementing a cloud ERP. We bridge the gap between IT and the business, working alongside system integrators and providing coverage for project roles across all workstreams to ensure your objectives are achieved.

Partnering for Sustainable Cloud ERP Success

Our consultants have deep technical expertise and experience with the systems driving today's digital enterprise—helping ensure your cloud ERP implementation delivers maximum value with minimal disruption. We can help you with:

- System Selection
- System Assessment & Optimization
- System Implementation Support

RGP has supported our clients with hundreds of system implementations and upgrades as well as technology optimization and software selection. Wherever you are on your cloud ERP journey, you can rely on RGP to help you deliver the expected benefits.

450+

System implementation projects

200+

System upgrades and technology optimization initiatives

75+

Software selection engagements

1,000+

Successful change management initiatives with 500+ clients

RGP Business Technology engagements over the last 5 years

Technology Partners

We take a holistic, vendor-agnostic approach designed to help you make smart decisions and execute sustainable best practices. Strategic alliances with leading cloud ERP providers enable us to deliver successful initiatives across every industry and business function.

Integrated Solutions Provide End-to-End Support

Program & Project Management

Cloud ERP implementations require expert project managers who can deftly align stakeholders, anticipate risks, and orchestrate multiple cross-functional workstreams, from launch to go-live. Our senior-level PMs have decades of experience and have executed hundreds of ERP transformations.

Testing Strategy & Execution

Every implementation requires a solid testing approach to ensure systems are ready for production release while minimizing the risk of unanticipated delays. We provide end-to-end integration testing, including user acceptance, test scripts, scenarios and results.

Reporting

Proactive planning ensures your data not only supports basic reporting needs, but also enables real-time analytics and insights. Combining expertise in data, finance and accounting, and compliance, our consultants define a reporting strategy, prioritize reporting requirements, and optimize reports.

Change Management & Training

Using the RGP Return on Change™ Framework, our experienced consultants drive adoption of change across your organization to ensure rapid realization of benefits. We also provide role-based training, curriculum development and delivery to support user adoption.

Business Requirements & Process Design

It's essential to understand the business, data and technical requirements at the outset and carefully define the scope. We provide a critical link between functional stakeholders and technical design teams, ensuring the design and implementation meet requirements and best practices.

Data Migration & Governance

Data migration is the backbone of any ERP implementation. We work with you to establish the appropriate governance and techniques to bring in clean, relevant data and maintain best practices on Day 2 and beyond. We also support data conversion into the new system.

Risk & Compliance

To ensure proper governance of a cloud ERP system implementation, it's critical to include risks and controls in your process design and requirements. A system implementation audit verifies that leading practices are followed.

Cutover & Hyper Care Support

A solid cutover strategy ensures a smooth go-live and minimizes operational impact, while the post-go-live support strategy helps ensure a higher system adoption rate. We proactively establish a cutover plan that accounts for all aspects of a cloud ERP implementation, including legacy systems, and establish a clear roadmap for post-go-live support.

About RGP

RGP is a global consulting firm that connects expertise with project work, helping our clients to tackle change and execute business transformation in a way that is intrinsically human. Disrupting the professional services industry since 1996, we're a pioneer in providing solutions that address the unmet needs of today's workplaces and the future-proofing requirements of tomorrow.
